Program Features It's a good idea to keep an eye on your disk drive's health status and perform an analysis from time to time. DiskAnalyzer Personal is a program which is capable of performing an in-depth analysis on your hard disk, so you can delete unnecessary files and free up space. Visually appealing and easy to use The program has a clean and intuitive interface in which you can use a tree view to select a volume or folder for disk space analysis. Once results are shown, you can view a report on the folders that take up the most disk space, as they are displayed in a descending order. Choose a view type that suits you Furthermore, you can change the viewing mode according to the file type, attributes, size, date, time and ownership, as well as a summary on the custom types. So, you can delete, copy and move files, or use a file compression tool in order to significantly reduce their size on the disk. Manage files and installed applications In addition, you can change the size unit (automatic, bytes, KB, MB, GB), empty the Recycle Bin, add or remove programs, as well as view big size, compressed, oldest, junk, zero size, temporary, Internet temporary, image, audio, video or duplicate files. Easily customizable interface Furthermore, you can choose a different visual theme and configure general options (e.g. create an exclusion list, apply various filters, show or hide particular columns). The program uses a high amount of system resources, includes a complete user manual and online tutorials, and didn't freeze, crash or pop up errors during our tests. In conclusion All things considered, we can say that DiskAnalyzer Personal is a reliable choice when it comes to keeping your computer in good shape. You easily get acquainted with its features due to the intuitive design and the amount of system resources used is not something to worry about. Publisher's Description Desktop Quarantine allows you to selectively quarantine one or more user accounts, groups of accounts, or all your accounts as a single folder that is quarantine-only and cannot be deleted. There are countless online services out there which enable you to backup or analyze the storage space of your computer. Among them, you'll be able to find Disk Analyzer Personal. This software allows users to do so in order to get a clear idea of the tools which are available and how to use them. This simple tool will help you to manage both the present as well as the future of your disks, i.e. you can regularly check the files that are consuming up valuable space and get rid of them in order to make some free space on your disk. The Interface Disk Analyzer Personal boasts a clean and intuitive interface. You can access it simply by clicking on the start button which is present in the lower left corner of your computer screen. The menu bar has been placed next to the start button. It consists of some essential options such as Shut Down, reboot, and preferences. The Settings On the options side, you will find an option called File Management and a button which will start the process of analyzing your disk. The select volume or folder window has been divided into several sections that are pertinent to file management, disk analysis and a summary report. Under File Management, you will find two options: Hide and Use Custom Types. In the first, you can decide which files should not be displayed in the selection window, and the second allows you to control the types of files that should be displayed. The Features Here, you can choose a storage location from the list of mounted local disks or the local drives on your computer. The Process Right now, Disk Analyzer Personal is running, and you will be able to analyze your disks if you click on the Start button. The process is quite simple. You simply select the disks to be analyzed and click on the button. Disk Analyzer Personal will start analyzing and show the results on the right panel. The list of the files which are occupying a large amount of space on your storage drives will be displayed. You can then identify the files which are taking up a lot of space on your computer. You can simply select the files, folders, images or music and click on the Delete button. The files will be then deleted from the selected drive or drives, and Disk Analyzer Personal will present you with a confirmation window that will ask you to agree to the operation. If you are happy with the results you will see, it is time to save and exit the program. If you want to delete all of the selected files, you simply click
