What's New In AutoCAD?

With Markup Import, you can import common sheet marks, like North, East, West, and North-East (N.E.), or import existing paper or PDFs with a click. The software can even do work with files that contain the popular SmartDraw and PlanPlus markup language, or files that contain older paper-based or PDF-based markups. Markup Assist can work with paper sheets, or a PDF, or a file with PlanPlus or SmartDraw marks on it. These marks are especially helpful when someone else has created them and shared them with you. As you make changes, you can open an existing paper or PDF file with PlanPlus or SmartDraw marks and incorporate the new changes into the drawing. When you import marks from a paper sheet, such as N.E. or a circle, the software can trace the edge of the circle automatically. This simplifies the workflow to incorporate the mark into the drawing and helps prevent errors. For more information, see Markup Import. Marking Your Work: Work with the most popular tools for capturing annotations and marks. A new pen-based annotation tool lets you draw on paper sheets or PDFs, which you can send to your AutoCAD drawing. (video: 4:35 min.) The standard pen is back, and it's better than ever. The new pen lets you draw, erase, and easily change your mark. You can also work with your drawing more naturally and easily by adding or removing multiple marks at once with Mark-Select. You can also change your mark with the new Make Mark-Select button. The Make Mark-Select button creates a circle around the crosshair, which you can draw, erase, or change by simply moving the crosshair. When you send the paper sheet to AutoCAD, the software highlights the marks on the sheet. You can also see the notes and circles you've made. Additionally, you can select a part of the page and view or edit it in a separate window. This enables you to get a better understanding of the page before editing it, saving you time and effort. Navigating, Finding, and Searching: Navigate your drawing more efficiently and precisely. Click or tap once and AutoCAD shows you where in your drawing you are, in both 2D and 3D. You can also show the current view in the 3D Navigator and switch
