Do you use the "Show Desktop" shortcut in your Windows 7 taskbar? For whatever reason, Microsoft would not keep that particular shortcut in the Windows 7 taskbar, so you need to use the Alt+Space combination to "Show Desktop" (the Windows 7 versions of Start menu is the only place where you can find that shortcut). Since the shortcut now does not exist anymore, you now need to change its shortcuts icon to another icon that represents the same functionality. How to change the Desktop Shortcut Icon In Windows 7 and 8, show the desktop can be done by using the shortcut combination "Alt+Space". In Windows 10, the shortcut key combination for the "Show Desktop" feature is not available at all. Therefore, you need to change the desktop shortcut to another one. Reboot and then right-click on the desktop and then click on "New" (or New Shortcut). Type a name for the shortcut in the Name field and then press Enter. Right-click on the desktop (or anywhere outside the drive, empty space will do as well) and click on "Choose icon...". Browse to the location where you want the desktop shortcut to appear and select the icon of the desktop shortcut. You can now press Enter and you will see the desktop shortcut on your computer. Do you need to fix a corrupt startup disk? Some users have reported that they cannot boot their computers anymore because of a corrupted startup disk. That happens because there is a corruption on the file boot.wim which is the default bootloader file of Windows 7 and 8. Boot.wim is a hidden file, it is located in C:\ (or in the equivalent location of your Windows installation). Therefore, you can correct this error using a third-party utility. These utilities are able to fix boot.wim files without damaging it. How to Repair a Corrupted Windows 09e8f5149f

Modern consumer and industrial touch screens are increasingly popular as input devices for environments and devices that previously relied on output devices such as keyboards, mice, pen tablets, and the like. Such touch screens provide a convenient way to provide information to users of the devices and, in some cases, are a substitute for the output devices altogether. The touch screen displays may be also configured to receive information in forms other than output as well. For example, the touch screen displays may receive input and display data as simple text, such as numbers, or more complex graphics, such as drawings or pictures. A touch screen includes a substrate on which is formed a plurality of pixels for displaying the graphical information and a transparent touch-sensitive overlay that is positioned over the pixels. When an object such as a user's finger comes into contact with the overlay, a control function is initiated depending upon the location of the contact.
