Keymacro is a program that enables you to insert macros into any text file. The program can be used for several purposes but mainly as a text editor. Keymacro creates macros that you can insert into any text file using the key strokes of a keyboard. These macros allow you to insert text into the file even if you don't know the format of the file. Every keystroke has its own code that you can easily enter using the keyboard. It is very easy to create a macro in Keymacro and insert it into any text file by using a text editor. The application allows you to insert a macro into a file that already contains some text. You can also create a macro from scratch and insert it into any text file. Using the 'Insert Macro' option you can access the Keymacro interface. Here you can configure the macro for insertion into the file and create the macro if needed. You can also insert macro information into a 'macro information' file. The 'macro information' file can be used by Keymacro to create the macro if it is not inserted yet.

Keymacro can create basic macros from your keyboard strokes. All the macros created with the program work with Windows Text document files. Keymacro is a great tool if you want to create macros in a number of different text files and add them into a separate file. KEYMACRO Key Features: Keymacro offers many useful features. ISO Mounter is a practical and comprehensive software solution whose main purpose is to help users, especially administrators who need to mount ISO images on their server and allow other users to access them through shared folders. These ISO files are considered to be images of an entire CD or DVD that can be easily created from optical discs. Using such files, you are able to distribute large programs over the Internet. Compared to other products of its kind, ISO Mounter comes in handy mostly for server administrators who need to mount ISO images on their server and share them with other computer users using specific folders. Since it is intended for Microsoft Home and Business servers, you are able to view the 'ISO Mounter' add-in available in the main window of the dashboard. When you want to mount a new ISO image, you can either access the 'Mount an ISO file' link, which is located in the right panel of the application or you can select the 'Mount ISO' option from the toolbar. A file browser dialog enables you to easily navigate through your folders and files and choose the corresponding ISO image. What's more, you can also mount ISO images which are not located directly in your server shared folders by using the 'Set relocation folder' option. After loading a new ISO file, you can access the option from the 'Common Tasks' panel and browse the shared folder where all the ISO images are located. Additionally, you can burn an ISO Image to a removable USB device effortlessly. Select the ISO file you want and choose the 'Burn ISO to disk' option from the right panel. After that, the application will automatically recognize the connected devices allowing you to create a bootable USB device with the selected ISO image. To wrap it up, ISO Mounter proves to be a steady and reliable solution when it comes to mounting ISO images stored on your server so you can allow other users to access them through shared folders. The present invention relates to a method for producing a cermet material having a high hardness and a high corrosion resistance and also relates to a sintered material which is useful for a gas turbine blade, a nozzle blade, or the like. Gas turbine blades and vanes which are used in a gas turbine are made of a nickel alloy and are exposed to a high temperature and a corrosive gas which is used for gas turbine. The blades and vanes may be exposed to the corrosive gas including sulfur-compounds, chlorine-compounds, nitric oxide, and the like. As a result of exposure to the corrosive gas, nickel alloy blades and vanes are corroded by corrosion products, such as nickel chloride and nickel sulfate, and thus their corrosion resistance is reduced.
