For a list of powerful drawing programs, including ones that even support vector graphics, I recommend Adobe Illustrator. In this book, I offer tips on how to use Photoshop for photo-retouching, and show you Photoshop's numerous features. I focus on the editing rather than the "artistic" aspects of editing. Because I work primarily with photos, I focus on use of Photoshop's tools, such as tools for drawing, painting, and adjustment. You can find out more about Photoshop for the creative side in Chapter 18. This book contains two perspectives on Photoshop. In the first half of the book, I address the more traditional side of Photoshop — the editing side. You discover the many ways that you can manipulate your photos. You master the tools that you need to finish the job. This part of the book provides you with the strategies that I use to solve most image-processing problems, including merging images, enhancing contrast, and cleaning up stray objects. I also provide tips on using Photoshop to apply filters, including a couple of my own. The second half of the book is written as a tutorial. I use this part of the book to explain Photoshop's tools and give you hands-on instruction on how to use the tools. For example, you can use Photoshop's Marquee tool to select part of a photo, eliminate unwanted objects, and make selections that you can further refine or blow out. You also discover how to use the multiple layers and layers in your image to produce an artistic effect. I also show you how to erase the background and create some fascinating and elegant designs. One of the main reasons that Photoshop is so popular is that it has so many features. Though it's very powerful, a lot of the software can be overwhelming and frustrating to use. If Photoshop overwhelms you, for goodness' sake, don't throw away all of your money and buy it! Instead, invest in a good training video that will help you navigate the features of Photoshop. You need to read the directions on the video carefully and understand what the information means. The training videos come on a DVD, but you can also watch a portion of the video on YouTube. Before getting started with Photoshop, you must have a good idea of what kind of photo-retouching job you want to tackle and what kind of results you're looking for. This way, you can determine the right tools for the job. If you're brand-new to Photoshop and need a bit of

Q: Amorphisms of topological  $S_k$ -vector spaces (no first countability required) I know that a morphism of topological spaces  $f: X \rightarrow Y$  is a continuous, open map if and only if for every open subset  $V \subseteq Y$ , the set  $f^{-1}(V)$  is open in  $X$ . In particular, when  $f$  is a continuous map from a  $T_1$  space  $X$  to another  $T_1$  space  $Y$ , we see that  $f$  is an open map if and only if for any  $x \in X$ , there exists a neighborhood  $U$  of  $x$  such that  $f(U) \subseteq V$ , where  $V$  is a neighborhood of  $f(x)$  in  $Y$  (and similarly for closed maps). When  $k = \mathbb{R}$  and  $X$  is a metric space, one can see that the condition holds for topological  $S_k$ -vector spaces. In particular, we can simply take  $U$  to be the set  $U \times \{0\}$ . However, I know of few elementary examples (and a nonexample) of continuous maps from a topological  $S_k$ -vector space to a topological  $S_k$ -vector space that are not open (and hence not even continuous). I was wondering if such examples exist, and what assumptions about  $X$  and  $Y$  are needed. An example would be fine. Let me also mention that in every proof I've seen, the condition that  $X$  is not locally compact is used. But I can imagine examples where this condition is not needed. A: As an elementary example, let  $X$  be the unit interval with the usual topology and let  $Y$  be the real line with the usual topology. Let  $f$  be the constant function  $f(x) = 0$ , and then  $f$  is not open. (This is perhaps the most non-elementary example, since I don't know what the "usual" topology on the real line is.) Q: Convert to Json format I am new to together to make web API. I have created the web API with given code. I need to retrieve the data and store in a variable in order

The brand designer Geng Lam has gone from strength to strength, recognising high quality craftsmanship as an essential for products that go to market. He is therefore excited to partner with the Leinenkugel brewery to co-produce this range of star-embazoned metal glasses. Crafted from stainless steel, these gleaming glasses are a far cry from the flimsy plastic of the lightweight alternative. The Leinenkugel's logo is laser engraved into the metal, giving these tumblers a high-end feel. Geng Lam uses an unconventional process. Sometimes he sits on a small stool with his glasses on, and painstakingly etches the details into the glass. Other times, he sits on top of a cart with his designs on the side, holding a steel piece of drafting equipment with his eye up to the lens in order to etch the label into the glass while thinking of the final design. If you are interested in having one of these branded glasses, get in touch. We are now in the process of building up stock, and will ship as soon as we have any available. It will take about 3 weeks to create these, so expect them to arrive about 6 weeks later. Our designer Geng Lam is also excited about a new collection of glassware that is being released by the brewery later in 2019. Q: How to open an excel workbook via TeamCity? I have the following build configuration in TeamCity: How can I specify in the post build section that the file \*.xslm should be opened with Microsoft Excel using the command line? Right now the only option available is "open file in editor". A: Using the non-GUI package manager, you'd do something like this: `packageFileName:Your.xlsm dest:c:\Your.xlsm` That's if you're using a feature
