Q: Column space of matrix I want to find the dimension of $Col(A)$ where A is an $n\times n$ matrix. So to be clear, let A be an $n\times n$ matrix and $A=\begin{pmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{n1} & a_{n2} & \cdots & a_{nn} \\ \end{pmatrix}$ So my question is how to find the dimension of $Col(A)$. A: You can find the dimensions of the subspaces of R^n spanned by any $n \times n$ matrix with rows $a_1,\ldots,a_n$. If A is the matrix you show then you need to understand what the columns are so that you can choose the a_i in such a way that the coordinates of the a_i are linearly independent. You can do this by understanding that you have a free choice of the coefficient vectors of the columns. So, I'm headed out of town for a few days, so I'll try and answer as much questions as I can throughout the trip. But don't be surprised if some others pile in and I forget to come back! Now, we are officially in the Mid-Atlantic USA for our first week and a half of our trip. Just as we did in Ohio, we will be staying with my older brother and sister-in-law, who have three children, and one of them is a toddler, so we will be trying to make some time to have fun with the whole family. First day: Church and a tour of Pittsburgh. Pittsburgh: Yes, a very exciting place! Waterfront and the architecture is amazing. A lot of rich history as well. I also loved seeing all of the old churches that are still being used. Sisters & Kaitlyn: {Looks like a church she wants to go in }Q: system

Brushes Brushes are one of the most versatile tools in Photoshop, and it is common for photographers to use their brushes for all kinds of different effects. At the simplest level, brushes are used for masking and retouching: the stippling effect in the Brush Tool (E) is known as a "stipple" brush. But a brush can also be used to create abstract and unique images, and even for much more complex painting techniques such as using certain brush settings to simulate marble. (See the methods section.) Here is a list of the most useful brushes for photographers. In Photoshop CS3 (and earlier versions), brush presets are grouped by the effect they create. However, Photoshop does allow you to create custom brushes, and some of the presets are based on the same brush codes as your custom brushes. This section lists the brushes that are grouped by effect. These groups are not in any particular order, so you can use any of them or just experiment with them until you find a combination that works for you. Brush types The type of brush you use will depend on the effect you want to achieve. In general, the three main types of brush are the Soft Round, Calligraphy and Flat Brush tools. These brushes have different effects, and each may be used for different image editing tasks. The first is the Soft Round brush. This brush has a rounded form and a soft edge. You can use it to paint over an image and mix the paint with the underlying layer, making it less visible than a paint layer. You can use a Soft Round brush to create a border for a photo, or you can use it to add highlights. Here is a demonstration of how to use a Soft Round brush. The image on the left shows the original image. A Soft Round brush with an opacity of about 25% was used to paint over the image. The paint layer was then made less visible by adding a layer mask, and the brush was erased. This effectively gave the image a painted border. Here is an example of how to use a Soft Round brush to paint with tint. In this case, the original image was converted to black and white. After that, you needed to paint over the image using a Soft Round brush with a 50% opacity. The second type is the Calligraphy brush, which has a more textured form and a hard edge. You can use this brush to create parallel lines for paper and
